| Project Title | Crystal Ball Analysis: Projecting Share Prices Of The Leading Gpu Titans |
| Maximum Marks | 3 Marks |

Project Proposal (Proposed Solution) template

This project aims to develop a predictive analytics solution to forecast the future stock prices of the leading companies in the Graphics Processing Unit (GPU) market. GPUs are essential components for high-performance computing, gaming PCs, and applications like artificial intelligence. The demand for GPUs is driven by various factors such as technological advancements, market trends, and consumer preferences, making their stock prices highly dynamic and subject to fluctuation. By leveraging historical financial data and market indicators, the model will identify key factors influencing stock prices, allowing stakeholders to make informed investment decisions, optimize portfolio management, and anticipate market movements effectively.

| Project Overview | |
|------------------|---|
| Objective | <p>The objective of the Crystal Ball Analysis project is to develop a machine learning model that accurately predicts the future stock prices of leading GPU companies. By analyzing historical financial data and identifying key factors influencing stock prices, the model aims to:</p> <ol style="list-style-type: none"> Predict Stock Prices: Forecast the future stock prices of leading GPU companies. Inform Investment Decisions: Help investors make data-driven decisions based on predicted stock prices. |

| | |
|--------------------------|--|
| | <ol style="list-style-type: none"> 3. Optimize Portfolio Management: Enable better portfolio allocation by anticipating market movements. 4. Enhance Market Understanding: Provide insights into the key factors driving GPU market dynamics. |
| Scope | <p>The scope of the Crystal Ball Analysis project includes the following key components:</p> <ol style="list-style-type: none"> 1. Data Collection: <ul style="list-style-type: none"> Gather historical financial data of leading GPU companies. Include relevant external data such as market trends and economic indicators. 2. Data Preprocessing: <ul style="list-style-type: none"> Clean and preprocess data to handle missing values and outliers. Perform feature engineering to create useful variables. 3. Model Development: <ul style="list-style-type: none"> Select and train appropriate machine learning models. Evaluate model performance using relevant metrics. 4. System Integration: <ul style="list-style-type: none"> Integrate the predictive model into existing financial analysis systems. Develop a user interface for stakeholders to access predictions. 5. Monitoring and Improvement: <ul style="list-style-type: none"> Continuously monitor model performance. Update the model with new data to ensure ongoing accuracy. |
| Problem Statement | |
| Description | Predicting stock prices of GPU companies is crucial for investors and stakeholders to make informed decisions. The dynamic nature of the GPU market, influenced by technological advancements, market demand, and |

| | |
|--------------------------|--|
| | <p>economic factors, makes accurate forecasting challenging. Traditional methods of stock price analysis are often reactive and insufficient.</p> <p>The problem is to accurately predict the future stock prices of leading GPU companies using historical data and other relevant factors. By developing a predictive model, stakeholders can proactively manage investments, optimize portfolio performance, and gain a deeper understanding of market trends.</p> |
| Impact | <p>The implementation of a stock price prediction system can have significant positive impacts, including:</p> <ol style="list-style-type: none"> 1. Informed Investment Decisions: Enable investors to make data-driven decisions, enhancing portfolio performance. 2. Risk Management: Proactively identify potential market risks and mitigate them effectively. 3. Market Insights: Gain a deeper understanding of market trends and factors influencing GPU stock prices. 4. Strategic Planning: Support strategic planning and decision-making with predictive insights. |
| Proposed Solution | |
| Approach | <p>The approach to developing a stock price prediction system involves the following steps:</p> <ol style="list-style-type: none"> 1. Data Collection 2. Data Preprocessing 3. Model Development 4. Integration 5. Continuous Improvement |
| Key Features | <p>1. Accurate Predictions:</p> <ul style="list-style-type: none"> • Utilizes advanced machine learning algorithms to forecast future stock prices. <p>2. Feature Engineering:</p> |

| | |
|--|--|
| | <ul style="list-style-type: none"> Incorporates a wide range of relevant factors such as financial indicators, market trends, and external events. <p>3.Real-Time Analytics:</p> <ul style="list-style-type: none"> Provides real-time prediction updates to support immediate decision-making. <p>4.User-Friendly Interface:</p> <ul style="list-style-type: none"> Delivers an intuitive dashboard for stakeholders to easily access predictions and insights. <p>5.Integration Capability:</p> <ul style="list-style-type: none"> Seamlessly integrates with existing financial analysis and management systems. <p>6.Automated Alerts:</p> <ul style="list-style-type: none"> Generates automated alerts for significant stock price movements, enabling proactive intervention. <p>7.Continuous Learning:</p> <ul style="list-style-type: none"> Continuously updates the model with new data to maintain and improve prediction accuracy. <p>8.Actionable Insights:</p> <ul style="list-style-type: none"> Offers detailed reports and analytics to help stakeholders understand key drivers of stock prices and formulate effective investment strategies. |

Resource Requirements

| Resource Type | Description | Specification/Allocation |
|-------------------------|------------------------------------|--|
| Software | | |
| Frameworks | Python frameworks & Web frameworks | Flask |
| Libraries | Additional libraries | numpy, pandas, flask, sklearn |
| Development Environment | IDE, version control | Google colab, Visual studio code ,python |

| Data | | |
|------|-------------------------------|--|
| Data | Training dataset, source code | Dataset from kaagle, source code from dashboard,images from google |
